Isaac Ewuoso Version 1 Progress Report A

Version 1 Progress Report A

The initial code for this website was generated using Claude AI. I prompted the AI to create the foundational structure of a Streamlit application and develop the primary navigation sections that will appear in the left sidebar menu: **Home, Search Resources, Browse Exemplars, Lesson Plans, and Rubrics**. The generated project skeleton has been uploaded to my GitHub repository, primarily within the *main.py* file.

At this stage, I am still learning how to organize and integrate the generated code effectively. As a result, I have experienced some confusion regarding where specific code components should be placed within the project. To address this, I created a series of folders and files based on inspecting examples provided by the instructor and my classmates, many of whom are way ahead of me when it comes to coding!

Description

Version 1 represents an iterative AI-assisted development process. Through a series of progressively refined prompts, I guided the AI to build different components of the website. These prompts included:

1. Create the project skeleton.
2. Build the Search Resources page.
3. Improve the search functionality and user experience.
4. Build the Browse Exemplars page.
5. Build the Lesson Plan Downloads page.
6. Build the Rubric Downloads page.

Development is still ongoing. I plan to continue refining my prompts to improve the visual design, usability, and overall architecture before deploying them on Streamlit application. In addition, I still need to incorporate real resources and instructional materials that users can interact with during usability testing.

What Has Been Implemented

One of my most significant accomplishments so far has been setting up my GitHub repository and organizing the project's files and folders. As someone who is still developing coding and debugging skills, I have found it challenging to inspect code line by line and identify issues independently.

The iterative prompting process has taught me the importance of developing the website incrementally rather than attempting to implement everything at once. Building and reviewing each component in stages has helped me better understand the structure and functionality of the application. However, I would benefit from additional feedback on both my code and the

organization of my GitHub repository, as well as suggestions for improving the overall design and architecture of the project and my GitHub repository.

Files

At this stage, I do not yet have final production assets. The current repository primarily contains the source code, project architecture outline, interface layout plans, and supporting folders that house the website's development files.

Next Steps

My next steps are to seek feedback on the current implementation of the code and the organization of the GitHub repository. I also plan to begin integrating real instructional resources, exemplar materials, lesson plans, and rubrics that users can evaluate during usability testing.

Although I have made meaningful progress in establishing the project's foundation, the website remains under active development. My immediate focus is on refining the design, improving functionality, incorporating real content, and continuing to build my understanding of the codebase as development progresses.

Isaac Ewuoso Version 1 Progress Report A

My GitHub Page as of October 9, 2026

ewuoso-lgtm Update print statement from 'Hello' to 'Goodbye'	e7483c9 · 28 minutes ago	**40 Commits**

Multimodal Studio Hub

A Streamlit app that helps college instructors and students find resources, browse exemplars, plan lessons, and use rubrics for multimodal projects.

Live app: https://YOUR-SUBDOMAIN.streamlit.app

Features

- Search resources by keyword and genre
- Browse student exemplars with instructor commentary
- Lesson plans with objectives, timelines, and materials
- Rubrics for common multimodal projects

Run locally

```
pip install -r requirements.txt
streamlit run main.py
```

Project structure

- `main.py` : the Streamlit app
- `docs/` : architecture outline and interface layout

Status

Sample placeholder content. Real resources are being added.
